Permissions reference

NetYCE uses six levels of permissions, each level corresponding to a role and increasing with every level.

These levels are:

User level	Role name
0*	Disabled
1	Browser
2	Opeator
3	Engineer
4	Modeler (Designer)
5	Manager
6*	System

These user levels are defined per user-group to which users are assigned. User level '0' is used to deny login to the NetYCE front-end. User level 6 is reserved for system maintenance and offers no additional permissions for front-end users over level 5.

These role names are defined in the Lookup table under the Variable name `UserLevel` of the class `Translation`
