

Verify that the banner is configured for login

Defines a customised banner to be displayed before the username and password login prompts. Below example helps in validating Banner configuration using NetYCE Compliance module

Example config

campus01-b02-access01 and *campus01-b02-access02* are the two reference devices which we are using for this example. One has banner configuration and other does not.

Below command output gives us the information.

campus01-b02-access01#

campus01-b02-access02#

How its done

Below are the steps to create new policy.

Operate → **Compliance** → **Policies** → **New**→

Click on the Node Group to select the relevant group of devices to add. Node group named "*building2_access*" holds the nodes of both the nodes:

Rule → **New** , **Rule Type** → Configuration , **Vendor** → Cisco IOS

Report/test results:

Below is how to create reports to see the results of the compliance policies.

Operate → *Compliance* → *Reports* → *New* → *Report Name "test"* → *Report type "Policies"* → *Policy Name "Sample 2 : Login banner"* → *Show Report*

This was a simple example to understand how to implement compliance policy to verify banner configuration.
