File manager

The 'Shared files' and 'Support files' are file manages for two distinct directory trees.

Shared files

Using the *Shared files* page, all files in the File-transfers directory tree are listed and can be managed. These file include all recent configuration backups (in `/previous`) and all OS-repository files in their vendor-based directory names (`/os/<vendor>`).
Individual job files will not be listed here.

Main Article Shared files

Support files

From the this page, file maintenance on the “User directory” tree can be performed. The `/users` tree is intended for end-users wanting to store (and share) their files on the system, the `documentation` tree is intended to general shared files.

The `/scripts` directory is intended to upload custom (e.g. python3) scripts for use in scenarios.
