Technical documentation - <https://wiki.netyce.com/>

## Add user

To add a user, just click the + and enter the user id. The user id can be changed at a later time when needed.

## Delete user

By selecting the user and clicking the  button. Confirmation will be asked before a user is actually deleted.

## Find user

It's possible to search for a user by using the  button and entering the user id. It isn't possible to search for a user by name.

## Manage user

When selecting a user, the details of that user will be displayed. These variables can be set and stored by using the **[Apply]** button.

## Permission levels

The permission settings will be updated as soon as the [group](#) id is set.

## Password management

The password can be set by entering the password and clicking the **[Set password]** button. The new password can also be expired by using the *Expire* checkbox.

The maximum age of the password can be set in the Max age field. This value is in days. A value of 0, sets no limit.
