

Show-cmd history

All results of command jobs containing *show* commands get stored in the database, the *Diff node config* tool gives you an overview of these results.

Put in the nodename in question and click the *Get Commands* button.

The available show commands stored will be listed, select the desired one and click the *Get Revisions* button.

Whereupon the dates of the beforehand selected commands will be shown, select the dates you want to compare: output will be shown underneath after clicking the *Show differences* button.
